SUFU 2012 Annual Meeting  
February 28 – March 3, 2012  
The Roosevelt  
New Orleans, LA
CME Accreditation

Educational Needs: Male voiding dysfunction is a common issue in encountered by both specialists and generalists. The frequency of Urinary incontinence and vaginal prolapse are common conditions encountered by urologists. The evaluation and treatment of these conditions has undergone tremendous change over the last few years with the introduction of new procedures on an almost monthly basis. It is difficult, if not impossible, for the practitioner to keep up with all of the new developments being made in this area. These conditions are often of significant importance to the patient as they can be adverse quality-of-life issues severely affecting one’s life. The diagnosis of these conditions can be challenging, as many of these patients have coexisting medical conditions or they may present with unique symptoms that require a keen understanding of the pathophysiology. In some cases, the treatment of incontinence or prolapse can create its own problems such as the utilization of the incorrect procedure leading to treatment failure or even the creation of voiding dysfunction due to outlet obstruction. A clear understanding of the current state of the art in the area of incontinence prolapse will be of tremendous benefit to the practicing urologist.

The SUFU program at the 2011 AUA annual meeting entitled “Issues in Incontinence and Prolapse” is intended to focus on special areas of concern to both general practitioners and specialists alike. The program will be divided into sessions starting with two state of the art lectures outlining the current status of the evaluation and treatment of both incontinence and prolapse. The second session will focus on the use of slings for incontinence. This is an important area of debate as there are at least four different categories of sling procedures and may practitioners are unclear as to which one is best utilized for which patient. The third session will focus on the important topic of obstruction after incontinence procedures. With the recent proliferation of sling procedures, it is important that practitioners are aware of the potential for this iatrogenic problem and be proficient in both evaluation and treatment of this complication. The fourth session includes two important topics in the area of pelvic prolapse. The issue of whether to place a sling at the time of major pelvic prolapse procedures remains controversial and is important for the practitioner understand the pertinent issues so that they can make an informed decision on when to place a sling when performing prolapse procedures. The other topic revolves around the controversial issue of whether the use of a robot when performing an abdominal sacral colpopexy is truly an advantage or just a new fad. Lastly, the fifth session is a short review of the new coding rules when performing urodynamic procedures.

Objectives: At the end of the session, the attendee should be able to:
1. Describe the current methods of evaluation and treatment for urinary incontinence and vaginal prolapse.
2. Identify the various advantages and disadvantages of the currently available sling procedures for stress urinary incontinence.
3. Describe the appropriate evaluation and treatment of iatrogenic bladder outlet obstruction after incontinence procedures.
4. Identify the issues surrounding the treatment of incontinence at the time of major pelvic organ prolapse procedures.
5. Assess whether the robotically assisted abdominal sacral colpopexy is in fact a better surgical procedure than an open abdominal sacral colpopexy.
6. Describe the new billing codes recently introduced for urodynamics.

Accreditation: The American Urological Association Education & Research, Inc. (AUAER) is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians.

Credit Designation: The American Urological Association Education & Research, Inc. designates this live activity for a maximum of 3.50 AMA PRA Category 1 Credits™. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

The AUAER takes responsibility for the content, quality, and scientific integrity of this CME activity.

AUAER Disclosure Policy: As a provider accredited by the ACCME, the AUAER must ensure balance, independence, objectivity and scientific rigor in all its activities.

All faculty participating in an educational activity provided by the AUAER are required to disclose to the provider any relevant financial relationships with any commercial interest. The AUAER must determine if the faculty’s relationships may influence the educational content with regard to exposition or conclusion and resolve any conflicts of interest prior to the commencement of the educational activity. The intent of this disclosure is not to prevent faculty with relevant financial relationships from serving as faculty, but rather to provide members of the audience with information on which they can make their own judgments.

Off-Label or Unapproved Use of Drugs or Devices: It is the policy of the AUAER to require the disclosure of all references to off-label or unapproved uses of drugs or devices prior to the presentation of educational content. The audience is advised that this continuing medical education activity may contain reference(s) to off-label or unapproved uses of drugs or devices. Please consult the prescribing information for full disclosure of approved uses.

Disclaimer: The opinions and recommendations expressed by faculty, authors, and other experts whose input is included in this program are their own and do not necessarily represent the viewpoint of the AUAER.

Evidence Based Content: As a provider of continuing medical education accredited by the ACCME, it is the policy of the AUAER to review and certify that the content contained in this CME activity is valid, fair, balanced, scientifically rigorous, and free of commercial bias.

Special Assistance/Dietary Needs: The American Urological Association Education & Research, Inc. (AUAER), an organization accredited for Continuing Medical Education (CME), complies with the Americans with Disabilities Act §12112(a). If any participant is in need of special assistance or has any dietary restrictions, a written request should be submitted at least one month in advance. For additional assistance with your request please call (847) 517-7225.
